Thanks a lot

The article is well structured, I however have the following observation:

1. How was the sample size of 35 obtained?
2. Did all the subjects respond to the questionnaire? How many did not respond?
3. Gender in table 1: Total frequency is 35 while total percentage is 31.5%.
4. Change variables under marriage to Married and Not married.
5. Last line of page 5: Do you meant to write 22,8%? Moreover the statement does not carry any meaning. Rephrase it.
6. What is the prevalence of WPV from this study?
