Dear Authors

The work is interesting, but you must pay more attention to the following aspects.

1. The literature review needs enhancement, it is quite brief. Are there any previous studies on this topic? If there, what are the results of their studies? In other words, the research gap should follow a comprehensive literature review.
2. Give a brief account and the steps of the methods used, FDM and AHP.
3. Add a table for the linguistic terms, the Likert scale, and the used TFNs.
4. Define the used fuzzy numbers; give the fuzzy results and the defuzzification method.
5. Symbolize the indicators to enhance readability, for example (A_i) and sub-indicators (A_{ij})
6. The last paragraph on page 2, you mentioned "A study to produce the toy index is necessary as a benchmark for the production of high-quality toys" Are you seeking quality only? You are seeking quality, safety, and children's development and learning through cognitive, psychometric, and affective aspects. Focus on your objectives.

Good Luck
