Potential competing interests: No potential competing interests to declare.

When I reviewed the manuscript, I have some comments as shown below:

1. The author must add the research methodology and its objectives.
2. What are the details of the sample being dealt with in terms of age, experience, etc.?
3. Show the questionnaire.
4. The questionnaire was distributed to 178 people. Why did seven people not respond to the questionnaire?
5. In Table No. 3, (Unstandardized Coefficients), (Unstandardized Coefficients) was adopted when discussing the results, and the standardized coefficients were not taken into consideration during the discussion.
6. The author should add future suggestions or recommendations for researchers.
