

# Review of: "Design of an intelligent controller for improving the solar system efficiency"

Milan Joshi

Potential competing interests: No potential competing interests to declare.

1. In order to understand the state-of-the-art in this field in a better way, the most relevant background information should be provided, and the most relevant literature should be cited. Especially, in order to give the readers a sense of continuity, a literature check of the papers published in this in recent years is preferred. The content of relevant papers should be related to the results and findings presented in your publication.
2. The legibility of the figures should be improved.
3. Some sentences with long descriptions are difficult to read and understand. Some typographical and grammatical errors in this manuscript should be carefully checked and corrected.
