Potential competing interests: No potential competing interests to declare.

The author discusses the growing influence of algorithms and artificial intelligence (AI) in modern society, and how this has created a new reality marked by a "computational" code. They argue that while technology provides many benefits, such as convenience and instant access to information, it also has negative effects on human cognition, attention span, and interpersonal communication. The author further emphasizes that dependency on technology may lead to a loss of essential human skills and qualities, such as deep reading, reflection, imagination, and sublimation. They also express concern about the impact of screen time on children's development and the potential dangers of social media addiction and manipulation. The author concludes by questioning whether the increasing reliance on computational codes and algorithms might eventually lead to a loss of humanity altogether, as we become increasingly disconnected from our natural world and our own nature.

Overall, the article is well written and makes important statement about the future. However, there are some areas where the article could be improved.

1. The article appears to be quite long and could benefit from better organization. Consider dividing the text into smaller sections with clear headings to help guide the reader through the various topics discussed.
2. The article makes several claims about the effects of technology on human cognition and behavior. To strengthen these arguments, consider providing more concrete examples and research studies that support these claims.
3. The article ends with a somewhat alarming prediction about the loss of humanity. To make the conclusion more impactful, consider offering some recommendations or possible solutions to address the issues raised in the article. This would provide readers with a more balanced and constructive perspective on the future of technology and its impact on humanity.

At bottom point, this is a fantastic and important read about the dominance of technology in the current age.

Congratulations to the author!
