Potential competing interests: No potential competing interests to declare.

It is a good effort by the authors. However, it is always advisable to have or develop a theoretical basis followed by a proposed research model to provide strength to the arguments put forward. In this study, there is no underlying theory on which the arguments of this study are based.

Abstract: The abstract should not come with subheadings. Therefore, try to combine sentences into one paragraph.

Methodology: This section lacks details that could have enhanced the study's overall validity and reliability. I recommend that this section be improved with the importance of defining the sampling method and research method used.
