This study has an interesting topic but needs a major revision to be published.

I recommend changing the title to be closer to the content and more precise. The abstract is too short and does not contain the results of the actual study. You need to improve the materials and methods section. The results part contains only two tables; please discuss your results. The discussion is also very brief; please discuss your results properly. The discussion is also very brief; please discuss the results in relation to the results of other similar studies. Statistical analysis is also necessary. After the discussion section, concrete conclusions of the study should be formulated.
