Potential competing interests: No potential competing interests to declare.

The study entitled “ ***Prevalence of Buruli Ulcer Among Residents in Jasikan Municipality: A Cross-Sectional Study***” has novelty . However, some minor concerns could be considered to improve the novelty as well as the flow of the manuscript:

1- Title and Abstract: Acceptable

2- Keywords: I could not see keywords.

3- Introduction: Acceptable but could be better by wider literature review particularly related new & update articles from domestic researchers.

4- M &M: Acceptable

5- Results: Acceptable

6- Discussion: Could be scientifically than present level using more and wider literature review and explanation of related and domestic survey and of course then using from them as Bibliography/References.

7- Bibliography/References: More domestic and update Ref(s). are necessary. Authors should do more literature review for using related domestic articles and therefore some more domestic Ref(s). (using from domestic Ref. is scientific discipline for publication of academic data.)

8- I could not see running title. it is compulsory.
