'The Impact of Study Environment on Students' Academic Performance: An Experimental Research Study'

Thank you for the opportunity to review the paper titled 'The Impact of Study Environment on Students' Academic Performance: An Experimental Research Study'. Through the method of a control experiment, studying the influence of environmental noise levels on students' performance is a topic worthy of attention. However, some shortcomings in each part still need to be further modified and improved.

The limited sample size raises concerns about the conclusiveness of findings.

The results and discussion are concise. No comparison between the findings of this study and those of previous research is presented.

The research operationalization needs to be explained to help readers understand how the study was conducted.
