Potential competing interests: No potential competing interests to declare.

title	the title is very interesting
Abstract	already describes the research clearly
Introduction	add research results on factors related to the competence of health workers regarding nutrition, research on the impact of competence on health
Materials and Methods	The Materials and Methods research was clear, add value to the validity and reliability of the questionnaire
Results	it would be better if there were crude OR and Adjusted OR tables
Discussion	add a more complete discussion of factors associated with low health professional knowledge about nutrition
