Title: Prevalence of Buruli Ulcer Among Residents in Jasikan Municipality: A Cross-Sectional Study Evaluation report

General comments: This cross-sectional study entitled Prevalence of Buruli Ulcer Among Residents in Jasikan Municipality conducted in the Jasikan Municipality, Ghana is not novel research although the findings may be useful for authors environment. However, the conduct of the study leaves some room for criticism of the methodology used.

Nevertheless, the manuscript can be considered for publication as "Short Communication" provided the authors address satisfactorily the comments raised in the manuscript and correct all errors indicated in the copy of the manuscript attached

Title : ok Abatract : ok Introduction : Ok Method Study site : it was appropriate for the author to include available water reservoirs in this region Research study: A period of six months is so small to determine a good prevalence, it was

interesting to conduct this study during one year period. Study Population : ok Sample Size Determination : ok Sampling

Methods : ok Data Collection Procedure : ok Reliability and Validity of the Questionnaire: ok Statistical Analysis : ok

Ethical Considerations : ok Results : ok Discussion : In the discussion, the author was asked to highlight the availability of rivers to better explain the spread of this disease. The discussion section need to be developed Conclusion : ok

References : ok Manuscript can be accepted for publication as short communication but requires Minor Revisions
