Potential competing interests: No potential competing interests to declare.

The empirical study is quite good; however, the article lacks some research parameters such as (1) lack of literature review, particularly on “age” and “color,” in the discussion part; (2) lack of scholastic views on how color impacts on the green color, why not the rest of the colors; (3) make clear what is meant by “age”? Does it mean the ages of research participants or the age of celebrities, etc., that were presented on the screen? In both cases, support your arguments with some scholastic views, please; (4) the use of non-technical jargon, i.e., obviously, strictly speaking, please avoid such terms in the article.
