Potential competing interests: No potential competing interests to declare.

1. Experimental setups need to be labeled for Figures 3 and 4, and similarly for **Figure 22**. Set-up of the irrigation system and Figure 23.
2. Explanations about individual components that were used in the experimental setup need not be elaborated; it's a common term. Eg., ATMEGA microcontroller, given in 2.1.1.1, Hardware components.
3. Result part needs not to mention the table data; instead, it would be in graphical form. Refer to tables 3 to 12. Proper explanation for the same is needed.
4. No specific data interpretation found in the conclusion part. Need to validate the present system with its effective functionality.
