Potential competing interests: No potential competing interests to declare.

This is just "essay," not an academic article. Some ideas are interesting, but the general organisation of the paper does not reflect standards (IMRAD). The author may try to focus on a few RQs and to develop them. For example, discussion and conclusions are not provided. Research questions are not defined and followed. Methodology not described... Literature review is not well related to the contents. The author may focus, for example, on democratic challenges; the exclusion issue is also important.
