Potential competing interests: No potential competing interests to declare.

As a result of the pandemic that has spread over the world, virtually all educational institutions have modified their methods of instruction and learning approaches. It has become the standard over the past year to teach students from the comfort of their own homes and through online learning. However, as a result of the problem, those who had previously relied on traditional methods were compelled to turn to technology. The acceptance of technology in human existence has accelerated, with the proliferation of cloud computing technology being one example, despite the fact that this uncertainty exists. The advent of online education has made it possible for more people all over the world to pursue higher education. In light of the fact that universities and colleges are closing their campuses, students and teachers now engage in learning and teaching activities through the use of digital and remote formats. There are now virtual online learning platforms that include learning portals, forum platforms, and even YouTube. With the goal of maintaining a consistent learning and evaluation process, both students and teachers should be willing to adopt new technology.

The suggestions that are listed below are as follows:

1. It is acceptable to make use of the title of the article because it is appropriate.
2. You should add more details to the abstract of the article, despite the fact that it is an extremely succinct summary.
3. There are no issues with the structure of the manuscript.
4. Indeed, there is no doubt that the manuscript contains accurate scientific information.
5. This means that all of the references should be from within the past five years, in addition to being sufficient and up to date.
6. A few sentences, on the other hand, might be difficult to comprehend for some people. It is appropriate for scholarly communications that the article is written in English.
