URLC10 Peptide Vaccine

National Cancer Institute

Source

National Cancer Institute. *URLC10 Peptide Vaccine*. NCI Thesaurus. Code C74087.

A cancer vaccine containing URLC10 (up-regulated lung cancer 10) epitopes with potential immunostimulatory and antineoplastic activities. Upon administration, URL peptide vaccine may stimulate a cytotoxic T lymphocyte (CTL) response against URLC10-expressing tumor cells. Up-regulated in lung and esophageal cancers, the function of URLC10 is unknown.
