Rapidly involuting congenital hemangioma

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Rapidly involuting congenital hemangioma. ORPHA:141184*

Rapidly involuting congenital hemangiomas (RICH) are a distinctive type of congenital hemangioma that are fully formed in utero and differ from non-involuting congenital haemangiomas (NICH; see this term) mainly because they undergo rapid postnatal involution.
