# E-liquid flavouring

Addiction Ontology

## Source

Addiction Ontology

**Definition:** A chemical substance that is designed to be part of an e-liquid to impart a flavour to the vapour produced when the e-liquid is used in an e-cigarette.

**Curator note:** This is not clear, need to think about because we are describing the flavourant - should the parent be different? Perhaps flavourant?

*This definition was imported from the Addiction Ontology (see <https://addictovocab.org/>). Comments and suggestions for improvements are welcome using the Qeios review system.*

*Definitions imported from the Addiction Ontology (AddictO) are what are known as 'ontological definitions'. See this article in Qeios for an explanation <https://www.qeios.com/read/YGIF9B>.*

*Ontological definitions can sometimes be hard to read. In those cases we also include an informal definition.*

*Definitions also often require elaboration to make it clear how they should be used and what they include. In those cases we include a comment.*

*Also, definitions sometimes require an explanation as to how they came about to help users understand how they relate to alternative definitions. In those cases we include a curator note.*
