

# Review of: "Crime Prevention through Environmental Design — Enhancing Safety and Livability in Maqboolpura, Amritsar: An Adaptive Approach to Crime Prevention in Informal Settlements"

Ali Aumran Al-Thahab

Potential competing interests: No potential competing interests to declare.

The research addresses an important and influential topic in the structure or deterioration of the built environment, which affects, negatively or positively, society liveability. It addresses an actual and real problem facing community members, which constitutes a fundamental dilemma when extrapolating the basic criteria for creating sustainable architecture and urban form. At the same time, discussed problem reflects deteriorating social and cultural aspects of society and its liveability challenges.

Research methodology and tools adopted demonstrate a great understanding of problem design and urban consequences and research main objectives. Due to the effective research approach, authors provide a broad perspective on various topics of notable architectural and planning importance. This problem was dealt with professionally in the empirical research study and the multiple tools adopted.

In our estimation, the research is considered one of the original research and studies, which the reader can greatly notice through the number of approved references and the method of dealing with and referring to them, in addition to the issues that were discussed.

The only negative point that can be recorded is the number of research papers and words. Authors certainly took the basic standards and limitations of the journals into account.

As a reviewer, I recommend accepting the research without any change due to the importance of this topic in creating a sustainable built environment.
