Potential competing interests: No potential competing interests to declare.

This article has a good idea; however, there are several flaws that the authors must address to improve its validity for publication. One of the main drawbacks is the inconsistency of writing and citing (i.e., in REF LIST) the references. For example, there are two refs named Agrawal et al. (2005), which must be referred to as 2005a and 2005b, which wasn't the case. In addition, in the text, they mention Agrawal and Gupta 2005, which is absent in the ref. list.

DOI was not mentioned in all references.

Also, the journal of the second reference of Agrawal et al. (2005) was wrong (THE RIGHT JOURNAL IS: Reprod. Biol. and Endocrinology).

Sometimes, the authors cited the full names; however, in other cases, they cited the family names???

My final decision: The article needs major revision to be suitable for publication.
