Potential competing interests: No potential competing interests to declare.

1. Abstract not comprehensive. Please include qualitative conclusion
2. For the introduction, the literature review part is good, but there is a missing research gap. It is important to highlight the research gap to support the objective of this research.
3. In the introduction, please include as well the targeted or potential applications of these hybrid composites.
4. Please re-draw Figure 7 as the quality of the image is poor.
5. Missing experimental set-up or diagrams to illustrate the testing for all three tests. The number of specimens tested for each test is also not mentioned. Therefore, are the presented results from one of the samples, or are they average values of samples being tested?
6. It would be more useful to add a table with the results and put the standard deviation.
7. The discussion part should be enhanced to improve the quality of the paper.
