I have some suggestions to share after reading the article.

First, the title is confusing and needs clarification on which type of fake it is focusing on.

Second, sections of the current article could be rewritten according to the structure of a research paper in order to be more readable.

Third, it is important to thoroughly and extensively review the state of the art literature. To be honest, there are only a few references, and many of them are irrelevant. Even more, I couldn't find the reference 2 (which is a review), and the reference 5 is not correctly written.

Lastly, it is unclear which experimental design was used to achieve the results.
