I am honored to be given the opportunity to review the article entitled **Optimizing Wastewater Treatment Performance System and Achieving Greater Efficiency to Improve Water Quality for Sustainability**.

This article has been written carefully written and the collection of references are comprehensive and relevant to wastewater treatment methods and their optimization approaches. I would recommend the author to add more literature on chemical or physical adsorption methods, utilizing MOFs because this area is expanding and has been the current trends in wastewater treatment.

Best regards,

Associate Prof Dr Maisara Abdul Kadir,

Chemical Sciences Department
