Potential competing interests: No potential competing interests to declare.

The article is useful for early career teaching faculty who are trying to understand the different formats of teaching expected in today's higher education globally. However, it would be beneficial to see a more critical approach to view each format and look at actual teaching strategies that need to be used to execute the instruction. This manuscript is a good start, but it needs a deeper analysis of the pedagogical approaches, especially in discussing the use of technology in the curriculum.
