

Review of: "Fluids, Vasopressors and Inotropes to Restore Heart-Vessels Coupling in Sepsis: Treatment Options and Perspectives"

Marius Andrei Zavalichi

Potential competing interests: No potential competing interests to declare.

First of all, I would like to congratulate the authors on the article. Sepsis still remains a threat to our patients' lives even with advanced therapies.

However, in my opinion, we cannot formulate a real debate using only a couple of cases, even in the case of a review. Also, the cases are very different in the need for finding the best approach to sepsis.

It could be better to propose an algorithm for diagnosis and, especially, for the right approach to sepsis therapy, and some tips and tricks that can help in medical practice.

It is a short review that shows us just a short story of how difficult sepsis management can be. Maybe this can be the foundation for a systematic review with statistical analysis that can offer much more knowledge.
