Potential competing interests: No potential competing interests to declare.

This article explores the progress made in personalized medicine and the utilization of diverse tools and technologies to facilitate more accurate and customized healthcare strategies for individuals. It highlights the significance of genetics, diagnostics, and data-driven methods in attaining this objective, along with the need for explicit standards and policies to facilitate the execution of precision medicine. While the study is well-articulated and the context is thoroughly established, there are substantial questions that should be addressed to enhance the manuscript further.

Firstly, it is essential to consider updating the cited articles to ensure the most current and relevant information is incorporated into the main text, specifically in the discussion.

Furthermore, to enhance the article's value, it would have been beneficial if the authors had conducted a systematic review or a scoping review. Without such an in-depth analysis, the article may be perceived as primarily narrative in nature. The inclusion of a systematic or scoping review would strengthen the study's methodological rigor and contribute to a more comprehensive understanding of the topic.

Additionally, I recommend considering the application of the published framework on determining the level of implementation of personalized medicine in international healthcare systems (Aguilera-Cobos L, García-Sanz P, Rosario-Lozano MP, Claros MG, Blasco-Amaro JA. An innovative framework to determine the implementation level of personalized medicine: A systematic review. *Front Public Health*. 2023;11:1039688. Published 2023 Feb 3. doi:10.3389/fpubh.2023.1039688). This framework can provide a structured approach, potentially leading to more insightful and meaningful results. Integrating such a framework into the study would not only add depth to the research but also align it with established methodologies in the field.

In conclusion, addressing these aspects would not only enhance the article's academic rigor but also contribute to a more robust and impactful exploration of the subject matter. I look forward to seeing these considerations reflected in future revisions.
