

Review of: "Impact of Environmental Education on the Knowledge and Attitude of University of Benin Students towards Waste Segregation"

Olukolajo Michael Ayodele¹

¹ Federal University of Technology, Akure

Potential competing interests: No potential competing interests to declare.

The title underscores the worldwide concern of municipal waste, emphasizing the significance of effective waste management, with a particular focus on segregation. This study holds relevance in promoting environmental awareness. However, the author(s) may want to improve the content based on the following observation

Environmental consciousness Abstract and Introduction: The abstract provides a broad overview, but more explicit explanations on the methodology and major findings would be beneficial. This would improve its informativeness and bring it more in line with the study's objectives and findings. Consider editing the content in the introduction to be more brief, focusing on the main features of the study, such as the research gap and specific research questions. Maintain a balance between brevity and completeness by ensuring consistency between the information offered in the abstract and the conclusion.

Literature Review, Methodology, and Results: While the literature review provides important studies, a more in-depth exploration of gaps or discrepancies in current literature would reinforce the reason for the study. More information, particularly on data collecting and potential biases, should be included in the methodology section. A clearer description of the hypotheses and the questionnaire validation method would improve the study's credibility. Using visual aids such as charts or graphs to present the results would allow for simpler interpretation.

Discussion and Conclusion: The discussion is comprehensive, but delving deeper into the implications of the findings would enhance its impact. Discuss not only what was found but also why it matters and how it contributes to the broader field. Explicitly state any limitations of the study, addressing potential weaknesses and guiding future work. Discuss the representativeness of the sample in relation to the broader population and any ethical considerations.
