Potential competing interests: No potential competing interests to declare.

Overall, this paper requires some major revisions:

- The introduction section requires more elaboration of the work done in the paper and also some fine-tuning in the
 writing (English) and sentences to be more comprehendible. The abstract does not contain all the necessary
 information and can be more thorough with regards to the tasks completed.
- 2. The introduction section also requires some fine-tuning for some sentences and needs a deeper look into what has been done, and how it relates to the current work. Perhaps adding a few more recent studies as well.
- 3. It is not very clear what the contribution of this work to science is and how it claims to be innovative. Is it just a repetition of the work that already exists, or does it bring more to the table? What are the innovations of the work?
- 4. Figures in this paper need a clearer and more concise explanation.
- 5. The conclusion of this work follows the same trend as the rest of it and can be revised in a more clear way.
