

Review of: "Communicating Cutting Edge Research on Physiological Networks: A Three-Step Method"

Puming Wang

Potential competing interests: No potential competing interests to declare.

The manuscript effectively demonstrates TikTok's use in science communication, highlighting an innovative approach to engaging diverse audiences. The clarity of writing and structure is commendable; however, this paper would benefit from addressing the educational implications of content strategies and assessment criteria in more detail. The combination of illustration and metaphor is a step in the right direction, but further refinement and explicit illustration will enhance the manuscript. Overall, the authors present a promising approach to teaching transposition, but consideration should be given to broadening audience acceptance and interaction to fully illuminate the success of their approach.

Recommendation: Can be accepted with some minor revision
