Potential competing interests: No potential competing interests to declare.

The article analyzes the main milestones in the development of disaster research, as well as the possibilities of using epidemiological methods in each of the phases of the disaster cycle. It is an excellent approximation to the epidemiology of disasters.

The design is appropriate to the objective of the proposed work, the methodology is adequate for the conclusions obtained.

The method used is a scope review given the characteristics of the theme. the diversity of documents and the narrative style.

The subject is innovative due to the proposed scheme of an adapted use of epidemiological method to the study of disasters and the identification of the main gaps to be solved in the research of disasters.
