

Peer Review

Review of: "A Primer on Large Language Models and their Limitations"

Mingyang Wan¹

1. Independent researcher

This paper provides a nice summary of LLMs, from data preparation to model training and promotion, i.e., how to use the LLMs. It also discusses the strengths and limitations of LLMs.

Strengths:

1. The paper is well-organized and concise, which provides a good reference for other researchers.
2. The paper has cited some popular papers as well as figures to help readers understand this field quickly. It also provides an overview of the history of how the GPT models have evolved over time.

Weaknesses:

1. The paper has not discussed the differences between the current paper and the other surveys of LLMs. For example, many other survey papers have also provided a summary of LLMs and summarized the strengths and limitations. This paper needs to explain how it is different from others.
