Excellent efforts on pertinent issue of healthcare management. Here are few suggestions for updating the manuscript:

1. In methodology section, after the first paragraph includes the components of the results rather than the planned methodology of this study.
2. Biasness regarding African countries needs revision. Not all countries in Africa (even those listed in this article) are underdeveloped.
3. The first paragraph of conclusions consists of the literature review. Conclusions needs to be in authors language and avoidance of referencing is my suggestion. The last two paragraphs are enough.
4. The list of references misses its alphabetic order in page 13.
