Potential competing interests: No potential competing interests to declare.

The article is of interest since, in addition to showing, through multidisciplinary criteria, the analysis of water management in this city in Vietnam, it provides a methodology which could be adjusted to be applied in other realities and, in this way, be able to establish a model that allows comparisons related to water management in different cities on the planet. It would be interesting to be able to establish a methodology that allows determining the levels of uncertainty of the data that is used to establish the different dimensions.
