

# Review of: "Proposing an integrated decision-making model to enhance the employee-oriented built environment in urban green buildings: A Review"

Amir M. Fathollahi-Fard<sup>1</sup>

<sup>1</sup> École de technologie supérieure, Université du Québec

Potential competing interests: No potential competing interests to declare.

I suggest revising the title as follows: "An integrated decision-making model to enhance the employee-oriented built environment in urban green buildings".

The literature review ignores many relevant papers about multiple criteric decision-making models and green buildings. For example, I suggest reviewing the following articles:

Shahsavari, M. M., Akrami, M., Gheibi, M., Kavianpour, B., Fathollahi-Fard, A. M., & Behzadian, K. (2021). Constructing a smart framework for supplying the biogas energy in green buildings using an integration of response surface methodology, artificial intelligence and petri net modelling. *Energy Conversion and Management*, 248, 114794.

Kamranfar, S., Azimi, Y., Gheibi, M., Fathollahi-Fard, A. M., & Hajiaghaei-Keshteli, M. (2022). Analyzing green construction development barriers by a hybrid decision-making method based on DEMATEL and the ANP. *Buildings*, 12(10), 1641.

Arab, M., Akbarian, H., Gheibi, M., Akrami, M., Fathollahi-Fard, A. M., Hajiaghaei-Keshteli, M., & Tian, G. (2022). A soft-sensor for sustainable operation of coagulation and flocculation units. *Engineering Applications of Artificial Intelligence*, 115, 105315.

Note that these articles are some suggestions. The authors must review more articles as a review paper.

After your discussions about your contributions in the introduction section, please, list your main research objectives.

At the end of introduction section, please, provide a summary for the rest of this paper.

For defining the abbreviations, revise the style as follows: "Leadership in Energy and Environmental Design (LEED)"

All the criteria used in Table 1 must be defined separately. They are not clear for readers.

Generally, this review paper lacks some analyses for journals, articles, popular authors, and managerial insights. I suggest reading the following review articles and do the same analyses:

Moosavi, J., Naeni, L. M., Fathollahi-Fard, A. M., & Fiore, U. (2021). Blockchain in supply chain management: A review,

bibliometric, and network analysis. *Environmental Science and Pollution Research*, 1-15.

Tian, G., Yuan, G., Aleksandrov, A., Zhang, T., Li, Z., Fathollahi-Fard, A. M., & Ivanov, M. (2022). Recycling of spent Lithium-ion Batteries: A comprehensive review for identification of main challenges and future research trends. *Sustainable Energy Technologies and Assessments*, 53, 102447.

Moosavi, J., Fathollahi-Fard, A. M., & Dulebenets, M. A. (2022). Supply chain disruption during the COVID-19 pandemic: Recognizing potential disruption management strategies. *International Journal of Disaster Risk Reduction*, 102983.

Pasha, J., Elmi, Z., Purkayastha, S., Fathollahi-Fard, A. M., Ge, Y. E., Lau, Y. Y., & Dulebenets, M. A. (2022). The drone scheduling problem: A systematic state-of-the-art review. *IEEE Transactions on Intelligent Transportation Systems*

The future research suggestions are unclear!
