Following a thorough evaluation of your manuscript, I wish to acknowledge the commendable relevance of your chosen topic and the meticulous characterization of your sample. However, I would like to offer constructive feedback to further enhance the quality of your work:

1. **Referencing Style:** The current referencing style presents inconsistencies, and some references appear to be inactive. To ensure accuracy and uniformity, I recommend adopting an appropriate citation system.
2. **Sample Size Discrepancy:** While your scientific estimation suggests a sample size of 424, it is noted that 624 subjects were included. Clarification on this variance would be beneficial for a more comprehensive understanding.
3. **Relevance of COVID-19 Prevention Details:** The inclusion of information regarding COVID-19 prevention measures, such as physical distancing and the use of face masks and hand sanitizer during data collection, appears unrelated to the central focus of your study. Streamlining the content to align with the specific research objectives is advisable.
4. **Comprehensive Referencing:** Strengthen the transparency and credibility of your study by providing detailed references for the literature and websites accessed during your research.
