ChIVPP Regimen

National Cancer Institute

Source

National Cancer Institute. *chIVPP Regimen*. NCI Thesaurus. Code C63376.

A derivative of the original MOPP regimen consisting of chlorambucil, vinblastine, procarbazine and prednisone used for the initial treatment of Hodgkin lymphoma. The drugs mechlorethamine and vincristine from the MOPP regimen have been replaced with chlorambucil and vinblastine to minimize gonadal and neurological toxicity, respectively.
