IHH wt Allele

National Cancer Institute

Source

National Cancer Institute. *IHH wt Allele*. NCI Thesaurus. Code C106446.

Human IHH wild-type allele is located within 2q33-q35 and is approximately 6 kb in length. This allele, which encodes indian hedgehog protein, plays a role in both bone growth and differentiation. Mutations in this gene are associated with acrocapitofemoral dysplasia and brachydactyly, type A1.
