Dear authors,

The topic of your study is interesting. In fact, you wanted to determine factors of the longitudinal mean arterial pressure among heart failure patients. To improve the study, it is better to consider the following comments:

1. Introduction should be shorter.
2. Doesn't it affect the outcome when the patients were diagnosed with the disease? (incident case or prevalent case).
Also, explain about the drugs they use and what drugs they should not use in the inclusion criteria in section Method.
3. Please write the title of the tables and figures in full so that it reflects the title of the research.
4. The discussion should be explained more and you should mention more scientific justifications.
5. Write the practical result of this research in the conclusion section.
6. Please explain, to investigate the effect of independent variables on the average longitudinal arterial pressure, for what period of time the variables are measured.
