**Potential competing interests:** No potential competing interests to declare.

The draft paper was revised, the topic was focused on the most important EVs parameters.

Few revisions and comments are required, and they are reported below:

- please add the nomenclature list for all acronyms and parameters
- the number of figures is excessive, it could be reduced or the supplementary material section could be used
- the abstract section should be revised, there are not results achieved in the study
- please revise the figures, some of them are blurred and, need increased sharpness, please check and add the unit of measure
- references added in the introduction section are poor and it is required a strong improvement to present the state of the art
- the introduction section must be rewritten, there are plenty of lacks, technical, economical aspect should be considered
- the scientific state of the art must be added
- the scientific gap is not clear
- please use SI as unit of measure
- references for the figures should be added in their caption
- the English structure for a scientific article needs a revision
- in section IV for A B C D module, please add details to make possible to understand how to reproduce the model
- there is a missing part to discuss the results achieved and to compare the results achieved with previous and published works
- the conclusion section should be revised
