Potential competing interests: No potential competing interests to declare.

- 1-In the abstract section, information about the study's microstructure and mechanical properties should be provided.
- 2-In the abstract section, the analyses performed in the study should be clearly stated, such as SEM, XRD.
- 3-In the experimental study part, the number of different composites produced and the production conditions should be clearly stated; reinforcer and matrix ratios should be specified, % by weight, etc.
- 3-In the density and porosity section, information about the experimental kits should be provided, and it should indicate which methods they used.
- 4-The types of specimens should be written below the samples in Figure 1, and the figures should be expressed as a and b.
- 5-It should be stated which of the samples is shown in Figure 2.
- 6-The image quality of Figure 3 should be improved.
- 7-In Figure 4, the names of the samples should be written below.
- 8-The conclusion section should be expanded.
