I think it is a necessary study in the current situation where environmental problems are seriously emerging.

It is impressive that the music education program procedure, based on 7 Da Vinci's ways of thinking for convergence education and the 13 tools of thinking by the Root Bernstein couple, was presented.

In the description of the program procedure, the procedure of actually "musicizing" natural sounds resembling music is thought to be an effective way of teaching and learning about problems created by combining "ecological environment" and "music education" that meets the level of elementary school students.
