Acinetobacter ursingii

National Cancer Institute

Source

National Cancer Institute. *Acinetobacter ursingii*. NCI Thesaurus. Code C119309.

A species of Gram-negative, strictly aerobic, oxidase-negative, non-fermentative, non-motile coccobacilli, in the phylum Proteobacteria. This species is glucose-non-acidifying, non-proteolytic, and is unable to hydrolyze gelatin. DL-lactate, citrate, azelate, D-malate, ethanol and acetate are utilized. *A. ursingii* is an opportunistic pathogen associated with nosocomial infections and may cause bacteremia or septicemia in humans.
