# Type I Collagen

National Cancer Institute

## Source

National Cancer Institute. *Type I Collagen*. NCI Thesaurus. Code C124129.

A heterotrimeric fibrillar protein complex comprised of two collagen alpha-1(I) chains and one collagen alpha-2(I) chains. Type I collagen is the most abundant fibrillar collagen in humans and is present in scar tissue, tendons, ligaments, bone, dermis, dentin, and organ capsules.
