Potential competing interests: No potential competing interests to declare.

Dear Researcher,

First of all, I appreciate your efforts to highlight technology in education. It is undoubtedly an optimistic aspect of digitalization and education. Based on the review, I would suggest you some revisions that will help improving your work.

Abstract: Well-written and structured, but it has some typos.

Intorduction: Needs revisions. It is brief and insufficiently describes why AI? Why AI in education? You can divide it into three paragraphs based on standard writing style. The first paragraph for introducing your topic, the second for the problem statement, and the third one will study objectives/gaps. The third paragraph is generally brief and quite focused on summarizing your study aims.

Other parts are well-written, providing a detailed review of AI in education, soft computing, etc., but the manuscript in its current form needs more structure. Once again, you can discuss this in the third para of your first section. It simple.

Discussion: The discussion is brief and needs an extensive overview of what you have discussed and highlighted in the previous parts.

Limitations: Should be discussed.

Implications: Should be provided.

Regards,

God bless
