

Review of: "Role and Mechanism of PKC- δ for Cardiovascular Disease: Current Status and Perspective"

Qin Gao

Potential competing interests: The author(s) declared that no potential competing interests exist.

This review introduces the main mechanisms of PKC δ and its roles in various cardiovascular diseases, and discusses it in detail according to plenty of literatures.

But the arrangement is not entirely clear, such as "Myocardial ischemia-reperfusion injury and fibrosis" was belonged to "Mechanism of PKC Involvement in Cardiovascular Disease

", but these mechanisms are not all happened in these cardiovascular diseases in the "Table 2". They have not the clear differentiate between the mechanism and these cardiovascular diseases.

And in "discussion" part, the reviewer thinks many description had been written in the third and forth parts, whether need to discuss separately?
