Dear Editor,

The experimental design is logically carried out, and the manuscript is clearly written. The manuscript is well-written and rounded and contains information that is both useful and timely. The sentence (The 2009 environmental protection program of Debrecen identified the pharmaceutical company (TEVA), fuel stations, airport, food companies, plastic industries, train service station (MÁV), and communal waste dumping sites to be among the other polluting agents within the area) must be explained with heavy metals in the area.
