

Review of: "Recent Trends and Techniques in Landslide Hazard Assessment"

M. N. Bagde

Potential competing interests: No potential competing interests to declare.

It seems the authors just carried out a review. I do not see any solid work from their side. Since the paper title needs to be revised, I would also suggest authors to add their own work or analysis to make it meaningful. Following are a few suggestions to improve the submitted manuscript:

1. In the introduction, the term "hydrology" is repeated. Just check it, please.
2. In the Landhazard section, check the term "landslide rick"; what does it mean?
3. In the Fig. 2 title, check the term "landslide hard" or so for its correctness.
4. Kindly acknowledge earlier work generously reported by the various authors by citing them.
5. While explaining Fig. 3, in the text the term "geological" or so is repeated.
6. Try to analyze the work presented therein or supplement it with your own work or so.
7. Try to improve the English language for its flow, grammar, and spellings, etc.
