Summary of the research and your overall work is impressive, but before giving my final decision, the authors must address some points such as:

1. The authors need to reconstruct the abstract to show the objective and motivation of this paper clearly.
2. The significance of the work carried out in this paper is not well explained relative to other important works.
3. The authors are requested to recheck all the definitions of variables and give more details about the meaning of these equations.
4. This paper contains some spelling mistakes, grammatical errors, and unnatural sentences. The English should be revised carefully.
