Potential competing interests: No potential competing interests to declare.

The wording of the article should be improved.

Sloppy writing, with too many mistakes that could have been avoided by careful reading before submitting the article.

The writing lacks a common thread. Paragraphs seem to be taken from various articles and juxtaposed without a logical sequence.

When figures are included in the text, they should be written out in full, using the abbreviation (Fig.) only when used as a complement, in brackets.

The statements you make are not supported by values or clear linear reasoning.

In figure and table legends, the terms Figure and Table should be written out in full.

Please see Comments and Proposals in the supplementary PDF.
