

Review of: "Blockchain EV Payment Systems: A Systematic Literature Review in Retail Energy Trading"

Bo Feng

Potential competing interests: No potential competing interests to declare.

This article provides a literature review on the new topic of blockchain application in electric vehicle charging payment, and points out future research directions. Nevertheless, some significant improvements are still needed in this manuscript.

1. The article provide to much detail in explaining how to use ASReview and Leximancer to choose literature and identify research topics, but the results may not be the focus of readers' attention.
2. The connection between the subsequent discussions and the previous topic analysis is inconspicuous.
3. A deep analysis, a specific review perspective, and authors' insights of the literature are needed in the Discussion section.
4. The future research direction is an important part of the literature review, and this part in the article is too simple and does not clearly indicate the specific research directions.
